

ORIGO Stepping Stones

Comprehensive Mathematics for Grades K-6

ORIGO Stepping Stones is a K-6 program that makes teaching and learning mathematics meaningful, enjoyable, and accessible for all.

Stepping Stones 2.0 promotes student growth by equipping students with the thinking and reasoning skills needed to become confident and successful in math.

Why Stepping Stones?

By utilizing the research-based **Spaced Learning Approach**, *Stepping Stones* offers a unique teaching and learning experience. Rather than cramming each topic into a concentrated period of time, which often results in forgetting the math, content is spread across the year. This gives students opportunities to engage with the content before a period of deliberate practice—developing mastery which is retained and reduces the need for continuous reteaching.

**Traditional Program
Scope & Sequence**

Versus

**Stepping Stones
Scope & Sequence**

Research indicates that with a **Spaced Learning Approach**, students can achieve the equivalent of 1.5 years of learning within a single school year. This approach is especially effective in math education, as each new skill builds on the foundation of future mathematical learning.
