Texas Essential Knowledge and Skills

Standard 1 - Mathematical process standards

The student uses mathematical processes to acquire and demonstrate mathematical understanding. The student is expected to:

- (A) apply mathematics to problems arising in everyday life, society, and the workplace;
- (B) use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution;
- (C) select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems;
- (D) communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate;
- (E) create and use representations to organize, record, and communicate mathematical ideas;
- (F) analyze mathematical relationships to connect and communicate mathematical ideas; and
- (G) display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

Standard 2 - Number and Operations (2NO) – Rational Numbers

The student applies mathematical process standards to represent and use rational numbers in a variety of forms.

Standard 3 – Number and Operations (3NO) – Computation

The student applies mathematical process standards to represent addition, subtraction, multiplication, and division while solving problems and justifying solutions.

Standard 4 – Proportionality (4P) – Ratios and Percents

The student applies mathematical process standards to develop an understanding of proportional relationships in problem situations

Standard 5 – Proportionality – (5P) Ratios, Percents, using scale factors, tables

The student applies mathematical process standards to solve problems involving proportional relationships.

Standard 6 – Expressions, Equations, and Relationships (6EER) – Independent/dependent variables

The student applies mathematical process standards to use multiple representations to describe algebraic relationships.

Standard 7 – Expressions, Equations, and Relationships (7EER) – Order of operations

The student applies mathematical process standards to develop concepts of expressions and equations.

Standard 8 – Expressions, Equations, and Relationships (8EER) – Geometry Relationships

The student applies mathematical process standards to use geometry to represent relationships and solve problems.

Standard 9 – Expressions, Equations, and Relationships (9EER) – One Variable

The student applies mathematical process standards to use equations and inequalities to represent situations.

Standard 10 – Expressions, Equations, and Relationships (10EER) -

The student applies mathematical process standards to use equations and inequalities to solve problems.

Standard 11 – Measurement and Data (11MD) – Coordinate Plane

The student applies mathematical process standards to use coordinate geometry to identify locations on a plane.

Standard 12 – Measurement and Data (12MD) – Represent Numerical Data

The student applies mathematical process standards to use numerical or graphical representations to analyze problems.

Standard 13 – Measurement and Data (13MD) – Interpret Numerical Data

The student applies mathematical process standards to use numerical or graphical representations to solve problems.

Note to Teachers: The Think Tank problems have been correlated to the Grade Level Standards in 6th Grade. Please refer to the TEKS and the grade level student expectations. This correlation is only a starting point in your instructional planning.
